Risk Verification

Risk Management:
Trust, But Verify

A comprehensive cloud software solution that provides concrete verification your risks are under control. Confidence comes from knowing your people and processes are aligned and in good health.

Core Capabilities

Everything in the Risk Analysis Solution, *plus:*

- Master Controls
- Performance Standards
- Schedule and Monitor Verifications
- Control Ownership
- For all types of risk (i.e. Technical, Operational, Enterprise)

Risk Verification Made Easy

When it comes to EHS risk, it's not enough to identify, analyze and control it. Just as important is verifying that the controls in place are operational and effective. That's what risk verification is all about. But doing risk verification well is challenging you have many facilities, especially when they have similar processes but different kinds of equipment. You need standardization, and you must account for site-based differences.

Risk Verification from VelocityEHS makes it easy for you to set performance standards for your processes that help establish and manage critical controls. You can also link your verifications directly to your risk register – the list of our potential hazards and associated risks, rated both before and after implementation of controls.

This makes your risk management process continuous throughout the plant life-cycle, improving efficiency and safety. Best of all, you get the visibility and reporting tools you need to document performance and drive continuous improvement.

Risk Control Requires Visibility

It's an all too common story. Your team is working hard at controlling risks, and has a great safety record, but then suddenly there is a serious accident. Frustrating events like this make it clear that it's not about how hard your people work, it's about how smart they work — and how important it is to be able to verify that you have the right controls in place, and that they're working properly.

Risk Verification streamlines your risk management across worksites with automated workflows and provides improved visibility into all of your activities — across all categories of risk faced by your organization. For example, it allows you to develop a performance standard for all of your facilities, assign a weighting to that standard, and add in notes for context so that auditors know exactly what to look for. Your verifications are linked directly to your risk register. That means you see not only the list of potential hazards and associated risks, but also the risk ratings before and after implementation of controls.

VelocityEHS does the hard work of aggregating and reporting the performance of all your facilities in meeting performance standards, so you have real-time results that you can easily share with the right people. It's the control and visibility you need, all within one simple dashboard view.
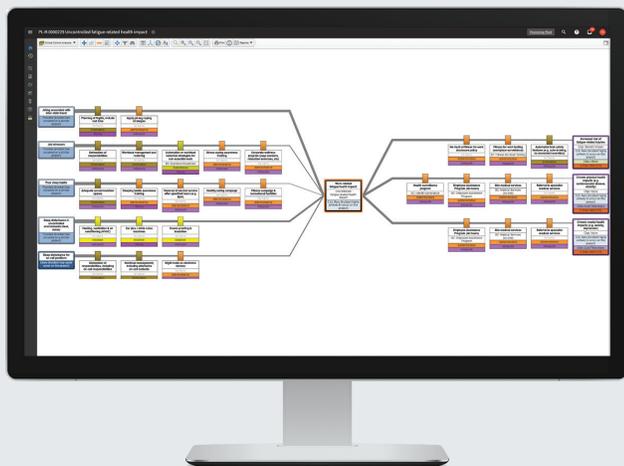

The VelocityEHS Platform

Check out all of our EHS management products, including:

- Air Emissions
- Audit & Inspection
- Compliance Management
- Corrective Action
- Ergonomics
- Incident Management
- Industrial Hygiene
- Management of Change
- SDS/Chemical Management
- On-Demand Training
- Performance Metrics
- Reporting & Dashboards
- Safety Meetings
- Training Management
- Waste Compliance
- Water Quality

Risk Verification provides a centralized and standardized view of the success of your risk controls. It's an extra layer of security so you can stop trusting – and start knowing - the right controls are in place and working.

Features & Benefits

Performance Standards

- Define metrics for measuring performance
- Incorporate performance ratings (e.g., high/medium/low, or percentages)
- Embed auditor notes to improve audit accuracy and efficiency
- Map performance standards to critical controls for standards audits

Schedule and Monitor Verifications

- Schedule & deliver critical control verifications to the right people
- Deploy no-training-required verifications methods
- Identify non-compliances in real-time
- Schedule risk reviews and performance standard reviews
- Categorize results by safety management system elements
- Track location level risk management activities

Improve Visibility & Reporting

- Drive employee engagement with org-wide visibility of risks
- Centralized access to inspection and audit data
- View real-time as inspection results as updated in the field
- Document compliance with international regulations, e.g., WHS (Australia), COMAH (UK), OSHA PSM (US), and ISO 45001
- Categorize results by safety management system elements

VelocityEHS Risk Management

EHS professionals know that workplace risks are everywhere. And even if you are able to get an accurate assessment of all the potential sources of your risk, prioritizing and controlling them is a huge challenge in their own right. Take control of your workplace risks with VelocityEHS.

VelocityEHS now offers a broader set of risk management capabilities, like bowtie risk assessments and risk analysis to help you meet your risk management goals.

Well-designed and intuitive solutions that are available across any device via the cloud give you and your employees anytime, anywhere access to the VelocityEHS platform.

Risk Analysis

Core Capabilities

- Hazard Studies (JSA/JHA, PHA and More)
- Bowtie Analysis
- Risk Registers
- Qualitative Risk Analysis
- For all types of risk (Technical, Operational, Enterprise)

Risk Verification

Core Capabilities

- Everything in Analysis, *plus:*
- Master Controls
- Performance Standards
- Schedule & Monitor Verifications
- Control Ownership

Risk Assurance

Core Capabilities

- Everything in Verification, *plus:*
- Master Bowties
- Quantitative Risk Analysis
- Multi-Scenario Assessment
- Cost Benefit Analysis
- Register Types
