

Sasol Generates Data and New Opportunities with VelocityEHS

Sasol

- Producer of liquid fuels, chemicals, and low-carbon electricity solutions
- Maintains a workforce of over 30,000 employees in 36 countries
- A VelocityEHS customer since 2011

Sasol is an integrated chemicals and energy company headquartered in South Africa with 30,000 employees in 36 countries. One of Sasol's many lines of business is phenolics, the process of taking chemical streams and refining them for use in specialty markets such as the production of enamels and in food products. The Sasol phenolics line is headquartered in Houston and has multiple sites in the United States and South Africa.

In 2011, process safety experts at Sasol identified a gap in the company's action management procedures where they believed improvements could be made. Sasol had identified several places where it knew action and incident management could be made more efficient and looked for a vendor to help make that happen. Sasol was drawn to *VelocityEHS* because of its modular approach that would allow Sasol to purchase only the modules/pieces it needed. Another feature of the *VelocityEHS* suite which Sasol liked was its ability to enable the company to replace its paper-based management of change system.

After implementing the system, Sasol saw improvement in its ability to manage corrective actions. With *VelocityEHS*, Sasol could access corrective actions from incident investigations and management of change activities, and later integrate its process hazard analysis activities into that system. Now, an employee can go to one location using *VelocityEHS* and see everything they are responsible for. Before, Sasol phenolics personnel maintained this information on either a hard copy written system or a spreadsheet database.

Sasol also found *VelocityEHS* provided robust amounts of data, and the company's safety professionals are finding new ways to use it. One of the things they're sharing with Sasol management is data analysis and reports, which can be shared fairly quickly now because of *VelocityEHS*. The safety professionals meet with plant managers using customized charts and reports generated from the system. Additionally, Sasol reports the adoption of *VelocityEHS* has resulted in significant time savings due to the move to the electronic management of change (MOC) system.

Benefits of *VelocityEHS*

Simplicity

What makes *VelocityEHS* different? We focus relentlessly on ensuring our software solutions are simple, easy-to-use, and able to solve complex business challenges quickly and capably.

Speed

Not only does our software provide valuable time savings across your organization, our implementations take less time, cost less money, and are more successful than traditional software systems.

Customer Service

Adoption of the *VelocityEHS* Platform is the beginning of a partnership, not the end of a transaction. Our customer advocates stand ready to serve our clients and help provide the simplest and most engaging user experience.

Scalability

Our dynamic solution remains scalable and nimble at every turn, helping you to reach your environmental, health, and safety goals faster and with less struggle. We grow with you!

Value

Our software pricing structure is straightforward, competitive, and encourages organization-wide adoption by eliminating per-user licensing entirely.

Help for You to Do What You Do Better!

The *VelocityEHS* solution eliminates the time-consuming challenge of tackling EHS data manually, and allows you to respond to challenges confidently and effectively. This frees you up to get back to handling the other critical issues that drive business performance and impact your core goals.
